

March 5, 2010

Quest Software has successfully tested vWorkspace 7.0 for compliance with the Office of Management and Budget (OMB) security requirements for Federal Desktop Core Configuration (FDCC) compatibility for Microsoft Windows XP and Vista.

The results of these tests demonstrate that in each instance, the FDCC reference image remained 100% compliant with the security configuration tests represented in the National Institute of Standards and Technology (NIST) Security Content Automation Protocol (SCAP) data streams.

More specifically, our testing determined that the standard installation, operation, and un-installation of vWorkspace's AppPortal component (which represents the *client* component of vWorkspace) does not alter the configuration settings from the current approved FDCC configuration.

Finally, it has been verified that vWorkspace, which is designed for normal end users, runs in the standard user context without elevated system administration privileges.

We utilized the FortiScan appliance from the NIST SCAP validated vendor Fortinet to conduct our SCAP testing and certification. The following five FDCC scans were run:

- Guidance for Securing Microsoft Windows XP Systems for IT Professional - Corrected (Version 1.1.0.0.2)
- Guidance for Securing Microsoft Windows XP Firewall for IT Professional (Version 1.1.0.0.0)
- Guidance for Securing Microsoft Windows Vista Systems for IT Professional - Corrected (Version 1.1.0.0.2)
- Guidance for Securing Microsoft Windows Vista Firewall for IT Professional (Version 1.1.0.0.0)
- Guidance for Securing Microsoft Internet Explorer 7 for IT Professionals (Version 1.1.0.0.2)
